E-Government Procurement System for India

(By Anirudh Uday Parvatikar)

Abstract:

Whenever people of country need to get some service done from government, be it State government or Central there are various rules and regulation that has been laid out by the government to be followed to get a process or work done.

These process are made in such a manner to ensure that all the work is done is correct manner with no error and information to be accurate when stored by the government about the citizens of country.

Aim: The aim of this research is to discover ways and techniques which can be implemented in government sector with help of new emerging technology to provide smooth and hassle free way to provide service to citizens of country.

Introduction:

As technology is evolving faster and faster day by day government should take advantage of this and should convert most of the process to digital method.

Due to the reach of smartphones to each and every corner of country nowadays almost everybody or should I say atleast 1 in a family will have a smartphone with them, thanks to the affordable internet cost now everybody has access to internet and people have adopted to change.

Definition of E-Government:

E-government stands for Electronic Government where work is done using digital means and lessening the dependence on more paper work and emphasizing more on digital work.

Domain of My interest: Examinations Conducted by Government Bodies.

Every Year government conducts various exams to recruit their citizens into public sector offices and now the times have changed and as everyone are heading towards digital life, schools are improving their teaching quality by adopting technology to teach students, exams conducted by most of private institutions are nowadays mostly digital making less use of papers.
